General information

Overview

The DanfossGear Motors is a range of peak performance fixed displacement hydraulic motors available in three different frame sizes: Group 1, Group 2, and Group 3, all as uni- and bidirectional version.

Constructed of a high strength extruded aluminum body with aluminum rear cover and aluminum front flange, all motors are balanced for exceptional efficiency and designed to ensure an excellent starting torque and, in the bidirectional version, to guarantee the ability to work with high back pressure and extremely low system pressure.

The flexibility of the range in each frame size combined with the high efficiency and low starting torque makes the Danfoss Gear Motors ideal for a wide range of applications sectors including on- and off-highway hydraulic fan drive systems, turf care, road bidge, fork lifts and municipal.

All the unidirectional motors have the same construction of the correspondent pump as well but, with inlet and outlet positioned at the opposite side for the same rotation.

General information

SNU2NN 06GB

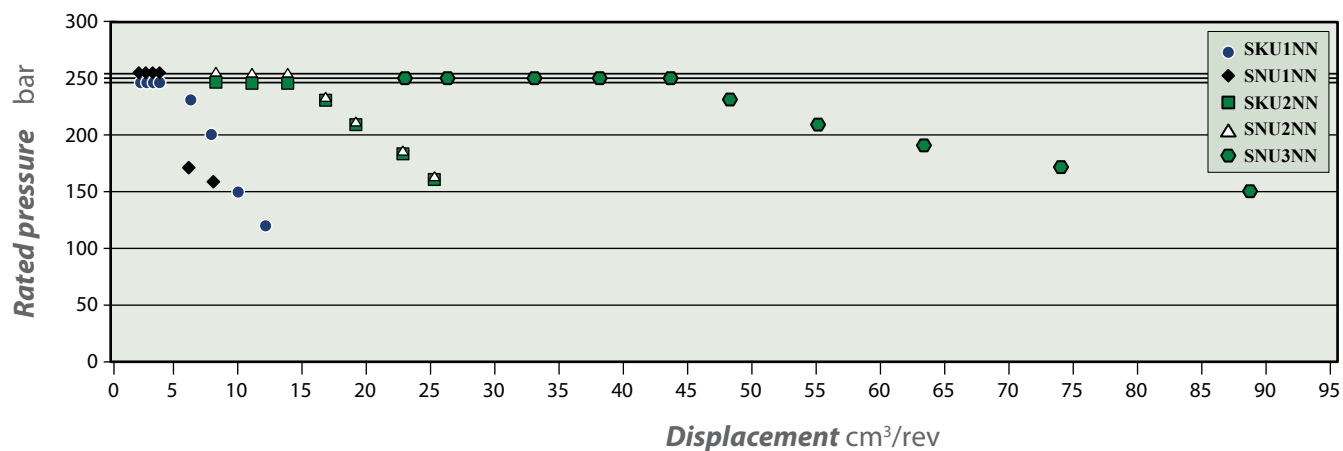

Features and benefits

- Three groups of frame sizes (Group 1, 2 and 3)
- Displacements from 2.6 to 90 cm³/rev [from 0.158 to 5.49 in³/rev]
- Available in uni- and bidirectional version for all the frame sizes, displacements and configurations
- Rated pressure up to 250 bar [3625 psi]
- Back pressure capability up to 250 bar [3625 psi]
- Speeds up to 4000 min⁻¹ (rpm) for Group 1 and 2, and up to 2500 min⁻¹ (rpm) for Group 3
- SAE, ISO and DIN mounting flanges and shafts
- Available with integrated relief valve in the Group 2 frame size and integrated anti-cavitation valve in Group 2 and Group 3 frame sizes

Motor displacements

Quick reference chart for unidirectional motor models (Group 1, 2 and 3)

General information

Quick reference chart for bidirectional motor models (Group 1, 2 and 3)

Determination of nominal motor size

Use these formulas to determine the nominal motor size for a specific application.

Based on SI units

$$\text{Input flow } Q = \frac{V_g \cdot n}{1000 \cdot \eta_v} \quad (\text{l/min})$$

$$\text{Output torque } M = \frac{V_g \cdot \Delta p \cdot \eta_m}{20 \cdot \pi} \quad (\text{N}\cdot\text{m})$$

$$\text{Output power } P = \frac{Q \cdot \Delta p \cdot \eta_t}{600} \quad (\text{kW})$$

$$\text{Motor speed } n = \frac{Q \cdot 1000 \cdot \eta_v}{V_g} \quad (\text{min}^{-1}(\text{rpm}))$$

Based on US units

$$\text{Input flow } Q = \frac{V_g \cdot n}{231 \cdot \eta_v} \quad (\text{US gal/min})$$

$$\text{Output torque } M = \frac{V_g \cdot \Delta p \cdot \eta_m}{2 \cdot \pi} \quad (\text{lb}\cdot\text{ft})$$

$$\text{Output power } P = \frac{Q \cdot \Delta p \cdot \eta_t}{1714} \quad (\text{hp})$$

$$\text{Motor speed } n = \frac{Q \cdot 231 \cdot \eta_v}{V_g} \quad (\text{min}^{-1}(\text{rpm}))$$

Variables SI units [US units]

V_g = Displacement per revolution	cm^3/rev [in^3/rev]
p_o = Outlet pressure	bar [psi]
p_i = Inlet pressure	bar [psi]
Δp = $p_o - p_i$ (system pressure)	bar [psi]
n = Speed	min^{-1} (rpm)
η_v = Volumetric eff. ciency	
η_m = Mechanical eff. ciency	
η_t = Overall eff. ciency ($\eta_v \cdot \eta_m$)	

System Requirements

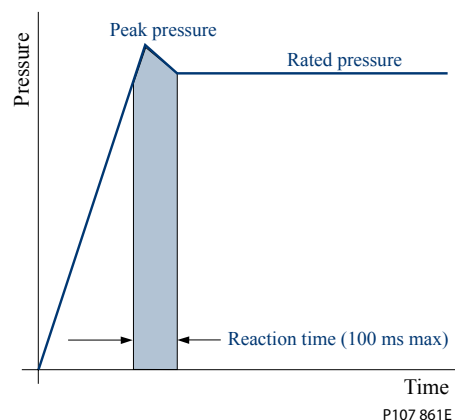

Pressure

Peak pressure is the highest intermittent pressure allowed.

The relief valve overshoot (reaction time) determines peak pressure. It is assumed to occur for less than 100 ms.

The illustration to the right shows peak pressure in relation to rated pressure and reaction time (100 ms maximum).

Rated pressure is the average, regularly occurring operating inlet pressure that should yield satisfactory product life. The maximum machine load at the motor shaft determines rated pressure

System pressure is the differential between the inlet and outlet ports. It is a dominant operating variable affecting hydraulic unit life. High system pressure, resulting from high load at the motor shaft, reduces expected life. System pressure must remain at, or below, rated pressure during normal operation to achieve expected life.

Back pressure is the average, regularly occurring operating outlet pressure that should yield satisfactory bidirectional motor life. The hydraulic load demand downstream of the motor determines the back pressure. Unidirectional motors cannot work with back pressure and the maximum back pressure allowed is 5 bar [72 psi] rated and 7 bar [101 psi] as peak.

Case Drain Pressure is the regularly occurring case drain line pressure that should yield satisfactory bidirectional motor life. It is recommended to design the case drain piping connecting the case drain direct to the tank in order to keep the case drain pressure as low as possible. The max. continuous case drain pressure allowed is 5 bar [72 psi] rated and 7 bar [101 psi] as peak.

Speed

Maximum speed is the limit recommended by Danfoss for a particular gear motor when operating at rated pressure. It is the highest speed at which normal life can be expected.

The lower limit of operating speed is the minimum speed. It is the lowest speed at which normal life can be expected.

The minimum speed increases as operating system pressure increases. When operating under higher pressures, a higher minimum speed must be maintained, as illustrated to the right.

System Requirements

Hydraulic Fluids

Ratings and data for gear motors are guaranteed when the hydraulic system operates with premium hydraulic fluids without containing oxidation, rust, or foam inhibitors.

These fluids have to work with good thermal and hydrolytic stability to prevent wear, erosion, or corrosion of internal components. They include:

- Hydraulic fluids following DIN 51524, part 2 (HLP) and part 3 (HVL) specifications
- API CD engine oils conforming to SAE J183
- M2C33F or G automatic transmission fluids
- Certain agricultural tractor fluids

! Caution

Use only clean fluid in the gear motors and hydraulic circuit. Never mix hydraulic fluids.

Temperature and Viscosity

Temperature and viscosity requirements must be concurrently met. Use of petroleum/mineral-based fluids is highly recommended.

High temperature limits apply at the inlet port of the motors. The motors should operate at or below the maximum continuous temperature. The peak temperature is based on material properties.

Don't exceed it.

Minimum (cold start) temperature relates to the physical properties of component materials.

Cold oil, generally, doesn't affect the durability of motors components. It may affect the ability of oil to flow and transmit power. For this reason, keep the temperature at 16°C [60 °F] above the pour point of the hydraulic fluid.

Temperature limits

Minimum (cold start)	Maximum continuous	Peak (intermittent)
-20°C [-4°F]	80°C [176°F]	90°C [194°F]

Minimum viscosity occurs only during brief occasions of maximum ambient temperature and severe duty cycle operation.

Maximum viscosity occurs at cold start only. During this condition, limit speeds until the system warms up.

System Requirements

- Size heat exchangers to keep the fluid within these limits
- Test regularly to verify that these temperatures and viscosity limits aren't exceeded
- Keep the fluid viscosity in the recommended viscosity range for maximum unit efficiency and bearing life

Fluid viscosity limits

Maximum (cold start)	Recommended range	Minimum
1000 mm ² /s [4600 SUS]	12-60 mm ² /s [66-290 SUS]	10 mm ² /s [60 SUS]

Filtration

Filters

Use a filter that conforms to Class 22/18/13 of ISO 4406 (or better). It may be on the outlet (pressure filtration) or inlet (return line filtration).

Selecting a filter

When selecting a filter, please consider:

- Contaminant ingress rate (determined by factors such as the number of actuators used in the system)
- Generation of contaminants in the system
- Required fluid cleanliness
- Desired maintenance interval
- Filtration requirements of other system components

Measure filter efficiency with a Beta ratio (β_x). β_x ratio is a measure of filter efficiency defined by ISO 4572. It is the ratio of the number of particles greater than a given diameter (in microns) upstream of the filter to the number of these particles downstream of the filter.

- For suction filtration with controlled reservoir ingress, use a $\beta_{35-45} = 75$ filter
- For pressure or return filtration, use a filtration with an efficiency of $\beta_{10} = 75$

The filtration requirements for each system are unique. Evaluate filtration system capacity by monitoring and testing prototypes.

Fluid cleanliness level and β_x ratio

Fluid cleanliness level (per ISO 4406)	Class 22/18/13 or better
β_x ratio (suction filtration)	$\beta_{35-45} = 75$ and $\beta_{10} = 2$
β_x ratio (pressure or return filtration)	$\beta_{10} = 75$
Recommended inlet screen size	100 – 125 μm [0.004 – 0.005 in]

Reservoir

The **reservoir** provides clean fluid, dissipates heat, removes entrained air, and allows fluid volume changes associated with fluid expansion and cylinder differential volumes. A correctly sized reservoir accommodates maximum volume changes during all system operating modes. It promotes de-aeration of the fluid as it passes through, and accommodates a fluid dwell-time between 60 and 180 seconds, allowing entrained air to escape.

Minimum reservoir capacity depends on the volume required to cool and hold the oil from all retracted cylinders, allowing for expansion due to temperature changes. A fluid volume of 1 to 3 times the pump output flow (per minute) is satisfactory. The minimum reservoir capacity is 125% of the fluid volume.

Install the suction line above the bottom of the reservoir to take advantage of gravity separation and prevent large foreign particles from entering the line. Cover the line with a 100-125 micron screen. The pump should be below the lowest expected fluid level.

System Requirements

Put the return-line below the lowest expected fluid level to allow discharge into the reservoir for maximum dwell and efficient deaeration. A baffle (or baffles) between the return and suction lines promotes deaeration and reduces fluid surges.

Line sizing

Choose pipe sizes that accommodate minimum fluid velocity to reduce system noise, pressure drops, and overheating. This maximizes system life and performance.

Design inlet piping that maintains continuous pump inlet pressure above 0.8 bar absolute during normal operation. The line velocity should not exceed the values in the table below:

Maximum line speed

Inlet	Outlet	Return
5 m/s [16.4 ft/sec]	2.5 m/s [8.2 ft/sec]	3 m/s [9.8 ft/sec]

Most systems use hydraulic oil containing 10% dissolved air by volume. Under inlet vacuum conditions the oil releases the dissolved air. Moreover, when inlet vacuum is particularly severe, the hydraulic fluid may cavitate, causing adjacent metal surfaces to erode.

Warning

Over-aeration is the result of air leaks on the inlet side of the pump, and flow-line restrictions. This problem will not occur if inlet vacuum and rated speed requirements are maintained, reservoir size and location are adequate, adequate pipes size is used, avoiding sharp bends, or elbow fittings causing a reduction of flow line cross-sectional area.

Motor shaft connection

Shaft options for gear motors include tapered, splined, and parallel shafts.

Plug-in drives, with a splined shaft, can impose severe radial loads when the mating spline is rigidly supported. Increasing spline clearance does not alleviate this condition.

Use plug-in drives only if the concentricity between the mating spline and pilot diameter is within 0.1 mm [0.004 in]. Lubricate the drive by flooding with oil. A three-piece coupling minimizes radial or thrust shaft loads.

Motor shaft connection

To avoid spline shaft damage, use carburized and hardened steel couplings with 80-82 HRA surface hardness.

System Requirements

Motor shaft load data form

Photocopy this page and fax the complete form to your Danfoss representative for an assistance. This illustration shows a motor with counterclockwise orientation:

Motor Life

Motor life is a function of speed, system pressure, and other system parameters (such as fluid quality and cleanliness).

All Danfoss gear motors use hydrodynamic journal bearings that have an oil film maintained between the gear/shaft and bearing surfaces at all times. If the oil film is sufficiently sustained through proper system maintenance and operating within recommended limits, long life can be expected.

High pressure impacts motor life. When submitting an application for review, provide machine duty cycle data that includes percentages of time at various loads and speeds.

B₁₀ life expectancy number is generally associated with rolling element bearings. It does not exist for hydrodynamic bearings.

Danfoss strongly recommends a prototype testing program to verify operating parameters and their impact on life expectancy before finalizing any system design.

Group 1 Gear motors

Motor design

SKM1NN

SKM1NN is the Group 1 bidirectional motor available in the whole displacements range from 2.6 up to 12 cm³/rev [from 0.158 up to 0.732 in³/rev].

Configurations include European and SAE flanges and shafts (Code 01BA, 01DA, 02BB, 02FA, 06GA, 06SA).

SKM1NN 06SA

SKU1NN

SKU1NN is a Group 1 unidirectional motor available in the whole displacements range from 2.6 up to 12 cm³/rev [from 0.158 up to 0.732 in³/rev]. The SKU1NN motor construction is derived from the correspondent pump SKP1NN.

Configurations include European and SAE flanges and shafts (Code 01BA, 01DA, 02BB, 02FA, 06GA, 06SA).

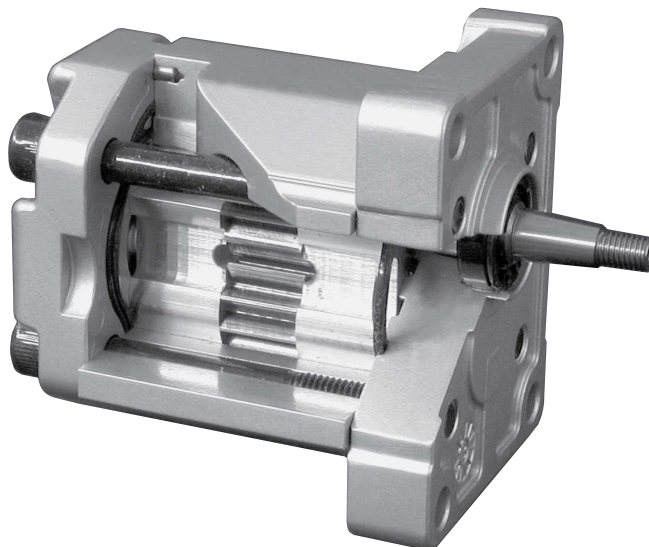

SNU1NN

SNU1NN is a Group 1 unidirectional motor available in a limited displacements range from 2.6 up to 7.8 cm³/rev [from 0.158 up to 0.464 in³/rev]. The SNU1NN

motor construction is derived from the correspondent pump SNP1NN. Configurations include European flange and shaft (Code 01BA).

Motor performance graphs

The following graphs provide typical inlet flow and output power for Group 1 motors at various working pressures. Data were taken using ISO VG46 petroleum /mineral based fluid at 50 °C [122 °F] (viscosity = 28 mm²/s [132 SUS]).

Group 1 Gear motors

Group 1 Gear motors

Group 1 Gear motors

Flange, shaft and port configurations

...For SKM1NN

Code	Flange		Shaft		Port	
01BA	European 01, 4-bolts pilot Ø 25.4 mm [1.0 in]		Taper 1:8		European in + pattern	
02BB	European 02, 4-bolts pilot Ø 30 mm [1.181]		Taper 1:8		German standard in X pattern	
02FA	European 02, 4-bolts pilot Ø 30 mm [1.181]		Parallel 12 mm [0.472 in]		European in + pattern	
06GA	SAE A-A 2-bolts		Parallel 12.7 mm [0.5 in]		Threaded SAE O-ring boss	
06SA	SAE A-A 2-bolts		SAE A-A 9-teeth splined		Threaded SAE O-ring boss	

...For SNU1NN

Code	Flange		Shaft		Port

Group 1 Gear motors

Shaft options

Group 1 motors are available with a variety of splined, parallel, and tapered shaft ends. Not all shaft styles are available with all flange styles.

A	B	C	D	E	F	G	H	I	J	K	L	M	N	O
					•	•						/		

Shaft		Mounting flange code with maximum torque		
Code	Description	01	02	06
BA	Taper 1:8	25 [221]	-	-
BB	Taper 1:8	-	50 [442]	-
DB	Splined Z15-m0,75-alfa 30°-L14	-	35 [309]	-
FA	Parallel 12 mm [0.47 in]	-	24 [212]	-
GA	Parallel 12.7 mm [0.50 in]	-	-	32 [283]
SA	SAE spline J 498-9T-20/40DP	-	-	34 [301]

Recommended mating splines for Group 1 splined output shafts should be in accordance with SAE J498 or DIN 5482. Danfoss external SAE splines are flat root side fit with circular tooth thickness reduced by 0.127 mm [0.005 in] in respect to class 1 fit. The external DIN splines have an offset increased by 0.1 mm [0.004 in]. These dimensions are modified in order to assure a clearance fit with the mating spline.

[Other shaft options may exist. Contact your Danfoss representative for availability.](#)

Caution

Shaft torque capability may limit allowable pressure. Torque ratings assume no external radial loading. Applied torque must not exceed these limits, regardless of stated pressure parameters. Maximum torque ratings are based on shaft torsional fatigue strength.

Integral relief valve - SKM1IN

Danfoss offers an optional integral relief valve integrated in the Group 1 motors rear cover. It is drained internally and directs all the flow from the motor inlet to the outlet when the inlet pressure reaches the valve setting.

The tables below show applicable variant codes for ordering motors with integral relief valve. Refer to [Model code](#) on page 16 for more information.

Group 2 Gear motors

Motor design

SNM2NN

SNM2NN is the group 2 bidirectional motor available in the whole displacements range from 6 up to 25 cm^3/rev [from 0.37 up to 1.538 in^3/rev].

Configurations include European and SAE flanges and shafts (Code 01BA, 01FA, 01DA, 02AA, 02DB, 03CA, 04AA/05AA, 04DB/05DB, 06GA, 06SA).

SNU2NN

SNU2NN is the group 2 unidirectional motor available in the displacements range from 8 up to 25 cm^3/rev [from 0.513 up to 1.538 in^3/rev]. The SNU2NN motor construction is derived from the correspondent pump SNP2NN.

Configurations include European and SAE flanges and shafts (Code 01BA, 01FA, 01DA, SNU2NN 06SA (cut away) 02AA, 02DB, 03CA, 04AA/05AA, 04DB/05DB, 06GA, 06SA).

Group 2 Gear motors

SKU2NN

SKU2NN is the Group 2 unidirectional motor available in the displacements range from 8 up to 25 cm³/rev [from 0.513 up to 1.538 in³/rev]. The SKU2NN motor construction is derived from the correspondent pump SKP2NN. Configuration includes SAE flange and shaft only (Code 06SA).

Technical data

The table below details the technical data for Group 2 gear motors based on the model and displacement configuration.

Technical data for Group 2 gear motors

* Before choosing this frame size, please apply to Danfoss technical department.

1 kg·m² = 23.68 lb·ft²

! Caution

The rated and peak pressure mentioned are for motors with flanged ports only. When threaded ports are required a de-rated performance has to be considered. To verify the compliance of an high pressure application with a threaded ports pump apply to a Danfoss representative.

Shaft options

Group 2 motors are available with a variety of splined, parallel, and tapered shaft ends. Not all shaft styles are available with all flange styles.

Valid combinations and nominal torque ratings are shown in the following table. Torque ratings assume no external radial loading. Applied torque must not exceed these limits regardless of pressure parameters stated earlier. Maximum torque ratings are based on shaft torsional fatigue strength.

Group 2 Gear motors

Shaft		Mounting flange code with maximum torque in N·m [lb·in]						
Code	Description	01	02	B2	03	04	05	06
DB	Spline DIN 5482 B17x14-L14		130 [1151]	130 [1151]		130 [1151]	130 [1151]	
FA	Parallel Ø15-L30+Key 4x25	90 [797]						
GA	Parallel SAE Ø15,875-L23,8- Key 4x18							80 [708]
GB	Parallel SAE Ø15,875-L50,8- Key 4x40							80 [708]
SA	Spline SAE J498-9T-16/32							75 [646]
SB	Spline SAE J498-11T-16/32 (Version 2 only)							150 [1328]

Recommended mating splines for Group 2 splined output shafts should be in accordance with SAE J498 or DIN 5482. Danfoss external SAE splines are flat root side fit with circular tooth thickness reduced by 0.127 mm [0.005 in] in respect to class 1 fit. The external DIN splines have an offset increased by 0.1 mm [0.004 in.] These dimensions are modified in order to assure a clearance fit with the mating spline.

Other shaft options may exist. Contact your Danfoss representative for availability.

! Caution

Shaft torque capability may limit allowable pressure. Torque ratings assume no external radial loading. Applied torque must not exceed these limits, regardless of stated pressure parameters. Maximum torque ratings are based on shaft torsional fatigue strength.

Integral relief valve - SNM2IN

Danfoss offers an optional integral relief valve integrated in the Group 2 motors rear cover. It is drained internally and directs all the flow from the motor inlet to the outlet when the inlet pressure reaches the valve setting.

The tables in [Variant codes for ordering integral relief valve](#) on page 24 show applicable variant codes for ordering motors with integral relief valve. Refer to [Model code](#) on page 33 for more information.

Group 2 Gear motors

Anti-cavitation check valve - SNM2GN

Danfoss offers an optional integral anti-cavitation check valve integrated in Group 2 motors bearing blocks. Available for all the displacements, the valve directs internally the flow from the motor outlet to the inlet, when the outlet pressure gets higher than the inlet one.

Valve schematic diagram

Anticavitation check valve cross section

Integral relief valve and anti-cavitation check valve - SNM2JN

Danfoss offers the Group 2 motors with an optional integral relief valve integrated in the rear cover and anti-cavitation check valve integrated in the bearing block. The integral relief valve is drained internally and directs all the flow from the motor inlet to the outlet when the inlet pressure reaches the valve setting. The anti-cavitation check valve directs internally the flow from the motor outlet to the inlet, when the outlet pressure gets higher than the inlet one.

Group 2 Gear motors

Valve schematic diagram

Outrigger bearing assembly - SNM2NN

An outrigger bearing is available for applications with high radial or thrust loads on the shaft. This option is used primarily for applications with high shaft loads. The design utilizes roller bearings in the front mounting flange. These bearings absorb the radial and thrust loads on the shaft so that the life of the motor is not affected. The use of roller bearings allows life to be described in B_{10} hours.

For unidirectional SNU2NN dimensions, see [Port dimensions](#) on page 45.

Group 3 Gear motors

Motor design

SNM3NN

SNM3NN is the Group 3 bidirectional motor available in the whole displacements range from 22 up to 90 cm³/rev [1.35 up to 5.38 in³/rev].

Configurations include European and SAE flanges and shafts (01BA, 01FA, 01DA, 02AA, 02FA, 02DB, 03BB, 03FB, 06AA, 06DD, 07BC, 07GA, 07SA).

Group 3 Gear motors

SNU3NN

SNU3NN is the Group 3 unidirectional motor available in the whole displacements range from 22 up to 90 cm³/rev [1.35 up to 5.38 in³/rev].

The SNU3NN motor construction is derived from the correspondent pump SNP3.

Configurations include European and SAE flanges and shafts (01BA, 01FA, 01DA, 02AA, 02FA, 02DB, 03BB, 03FB, 03DB, 06AA, 06SA, 07BC, 07GA, 07SA).

Technical data

This table details the technical data for Group 3 gear motors based on the model and displacement configuration.

Technical data for Group 3 gear motors

Maximum speed		2500	2500	2500	2500	2300	2300	2200	2100	2100	2100
All (SNU3NN, SNM3NN)											
Weight	kg [lb]	6.8 [15.0]	6.8 [15.0]	7.2 [15.8]	7.3 [16.1]	7.5 [16.5]	7.6 [16.8]	7.8 [17.3]	8.1 [17.9]	8.5 [18.7]	8.9 [19.6]
Moment of inertia of rotating components	x 10 ⁻⁶ kg·m ² [x 10 ⁻⁶ lb·ft ²]	198 [4698]	216 [5126]	246 [5837]	267.2 [6341]	294.2 [6981]	312.2 [7408]	342.3 [8123]	378.3 [8977]	426.4 [10 118]	486.5 [11 545]

1 kg·m² = 23.68 lb·ft²

! Caution

The rated and peak pressure mentioned are for motors with flanged ports only. When threaded ports are required a derated performance has to be considered. To verify the compliance of a high pressure application with a threaded ports pump apply to a Danfoss representative.

Anti-cavitation check valve - SNM3GN

Danfoss offers an optional integral anti-cavitation check valve integrated in Group 3 motors bearing blocks. Available for all the displacements, the valve directs internally the flow from the motor outlet to the inlet, when the outlet pressure gets higher than the inlet one.

Valve schematic diagram

Group 3 Gear motors

Anticavitation check valve cross section

Dimensions

SNM3NN, SNU3NN – 01FA, 01DA and 01BA

Standard porting drawing for 01FA, 01DA and 01BA

Bidirectional motors dimensions – 01FA, 01DA and 01BA

Frame size		022	026	033	038	044	048	055	063	075	090
Dimension	A	63.0 [2.480]	64.5 [2.539]	67.0 [2.637]	68.8 [2.708]	71.0 [2.795]	72.5 [2.854]	75.0 [2.952]	78.0 [3.070]	82.0 [3.228]	87.0 [3.425]

Products we offer:

- DCV directional control valves
- Electric converters
- Electric machines
- Electric motors
- Gear motors
- Gear pumps
- Hydrostatic motors
- Hydrostatic pumps
- Orbital motors
- PLUS+1® controllers
- PLUS+1® displays
- PLUS+1® joysticks and pedals
- PLUS+1® operator interfaces
- PLUS+1® sensors
- PLUS+1® software
- PLUS+1® software services, support and training
- Position controls and sensors
- PVG proportional valves
- Steering components and systems
- Telematics

Danfoss Power Solutions is a global manufacturer and supplier of high-quality hydraulic and electric components. We specialize in providing state-of-the-art technology and solutions that excel in the harsh operating conditions of the mobile off-highway market as well as the marine sector. Building on our extensive applications expertise, we work closely with you to ensure exceptional performance for a broad range of applications. We help you and other customers around the world speed up system development, reduce costs and bring vehicles and vessels to market faster.

Danfoss Power Solutions – your strongest partner in mobile hydraulics and mobile electrification.

Go to www.danfoss.com for further product information.

We offer you expert worldwide support for ensuring the best possible solutions for outstanding performance. And with an extensive network of Global Service Partners, we also provide you with comprehensive global service for all of our components.
