## Orbital Motors Features

---

**Topics:**

- *Technical Features*

- Smooth running over the entire speed range
- Constant operating torque over a wide speed range
- High starting torque
- High return pressure without the use of drain line (high pressure shaft seal)
- High efficiency
- High radial and axial bearing capacity
- Long life under extreme operating conditions
- Robust and compact design
- For applications in both open and closed loop hydraulic systems
- Suitable for a wide variety of hydraulics fluids

## **Technical Features**

---

The program is characterized by technical features appealing to a large number of applications and by motors that can be adapted to a given application.

*Adaptions comprise the following variants:*

- Motors with:
  - corrosion resistant parts
  - integrated negative holding brake
  - integrated flushing valve
  - speed sensor
  - tachometer connection
  - black finish paint
- Short motors without bearings or Ultra short motors
- Wheel motors with recessed mounting flange

---

---

## Introduction

---

The OMEW motor comes in two different versions. Both versions are designed mainly for propel applications, but they are optimized for different conditions.

A. OMEW standard version.

The advantage of this motor lies in the high speed area. When the flow exceeds 40 l/min this motor is to prefer due to a lower pressure drop.

B. OMEW with low speed option.

The advantage of this motor lies in the Low speed area. This motor has higher efficiency at low speed / medium pressure. When the flow is below 40 l/min this motor is to prefer.

This motor also has the Brake nose which makes it possible to add a drum brake to the motor.

Although the OMEW transmission motor was mainly designed for vehicles such as

- Walk-behind mowers
- Ride on mowers
- Scissor lifts
- Sweepers
- Road rollers

It is also suitable for a wide range of other applications that require a motor that is both compact and gives high efficiency.

Characteristic features that distinguish the OMEW motor are

- Compact design
- Low weight
- High total efficiency
- High starting torque
- Smooth low speed performance
- Larger bearing capacity
- High pressure shaft seal
- No drain line

## Versions

---

**Topics:**

- *Versions*

## Versions

Mounting flange	Shaft	Port size	Pilot	Eur ope an vers ion	US vers ion	Clo ckw ise shaf t	Cou nter cloc kwi se ion	Sta nda rd shaf t	Low spee d shaf t	Painte d black	Main type design ation
Wheel, Standard	Tapered 1 1/4 in	7/8 - 14 UNF	3.25 in	X	X	X				Yes	OME W
		7/8 - 14 UNF	3.25 in		X		X	X		Yes	OME W
	Tapered 35 mm	G 1/2	82.5 mm		X		X	X		No	OME W
		G 1/2	82.5 mm		X		X	X		No	OME W
Wheel, Low Speed	Tapered 1 1/4 in	7/8 - 14 UNF	3.50 in	X	X				X	Yes	OME W
		7/8 - 14 UNF	3.50 in	X		X		X	Yes		OME W

In applications that mainly involves operation in one direction, we recommend a corresponding motor with either CW- or CCW-rotation.

### *High pressure seals*

Since all OMEW motors are fitted with a high-pressure shaft seal, there is no need for a drain line.

\* Direction of rotation

## Code numbers

---

**Table 1: OMEW code numbers**

Code Numb ers	Displacement							
	100	125	160	200	250	315	345	400
151H	3108	3109	3110	3111	3112	3113	3114	3115
151H	3118	3119	3120	3121	3122	3123	3124	3125
151H	2002	2003	2004	2005	2006	2007		
151H	2011	2012	2013	2014	2015	2016		
151H	3080	3081	3082	3083	3084	3085	3086	3087
151H	3090	3091	3092	3093	3094	3095	3096	3097

*Ordering*

Add the four digit prefix “151H” to the four digit numbers from the chart for complete code number.

**Example:**

151H3084 for an OMEW 250 with 1 1/4 in tapered shaft, port size 7/8 - 14 UNF and clockwise rotation (CW).

**Note:**

Orders will not be accepted without the four digit prefix.

	[psi]		[3260]	[3260]

## Maximum permissible shaft seal pressure

### OMEW with high pressure shaft seal

*CW version (clockwise rotation)*

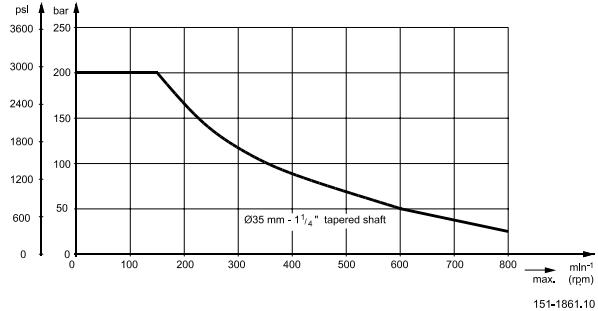

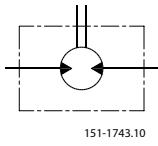

1. By clockwise rotation: The shaft seal pressure equals the return pressure.
2. By counter clockwise rotation: The shaft seal pressure equals the input pressure

*CCW version (counter clockwise rotation)*

1. By counter clockwise rotation: The shaft seal pressure equals the return pressure.
2. By clockwise rotation: The shaft seal pressure equals the input pressure

<sup>1)</sup> Intermittent operation: the permissible values may occur for max. 10% of every minute.

<sup>2)</sup> Peak load: the permissible values may occur for max. 1% of every minute.

**Figure 1: Max permissible shaft seal pressure**

## Pressure drop in motor

---

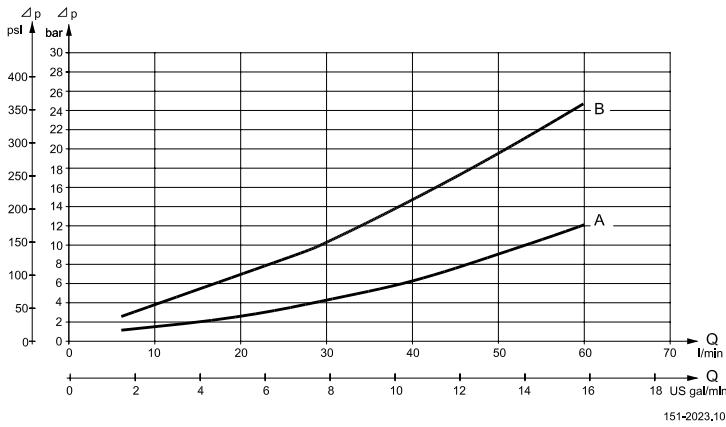

### Standard

A: OMEW 100 - 400

### Low Speed

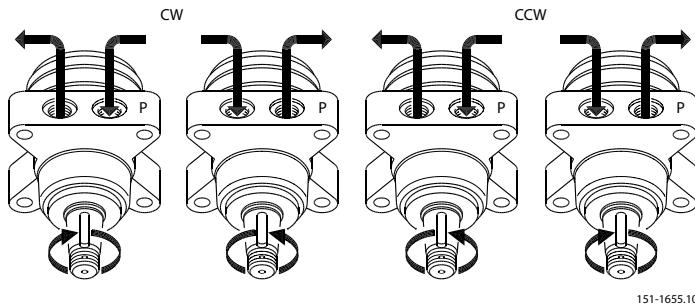

A: OMEW 100 - 160

B: OMEW 200 - 400

The curve applies to an unloaded motor shaft and an oil viscosity of 35 mm<sup>2</sup>/s [165 SUS]

## Direction of shaft rotation

**Figure 2: CW - motor / CCW - motor**

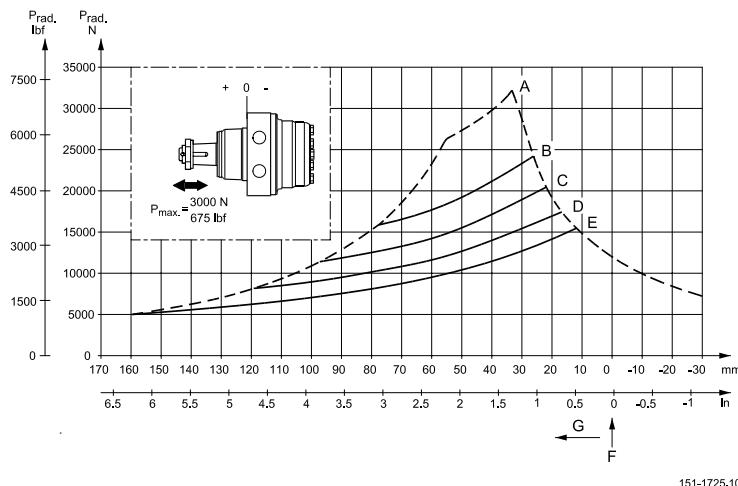

## Permissible shaft loads for OMEW

As the OMEW output shaft is embedded in needle bearings and the mounting flange is recessed it is possible to fit a wheel hub direct onto the shaft so that the radial load acts midway between the needle bearings.

Based upon the requested max. speed and the point of action of the radial load the permissible shaft load can be read from the curves shown below.

Curve A shows the max. radial load. If the radial load exceeds these values there is a potential risk of breakdown.

The other curves apply to a B10 bearing life of 2000 hours at the indicated speed when applying a hydraulic mineral oil with an adequate content of anti-wear additives.

- A:** Max. radial load
- B:**  $n = 50 \text{ min}^{-1}$  (rpm)
- C:**  $n = 100 \text{ min}^{-1}$  (rpm)
- D:**  $n = 200 \text{ min}^{-1}$  (rpm)
- E:**  $n = 400 \text{ min}^{-1}$  (rpm)
- F:** Front flange
- G:** Direction toward shaft
